

Modules Overview

Modular Systems = Increased Flexibility

The list below outlines several modules that offered as an upgrade to the AG Base system. Enhancements vary in size from completely integrated Sub-Systems (such as the Payroll and Pallet Ticketing modules) to smaller updates that provide greater flexibility within the system.

We designed our systems with modular architecture in mind, so that each customer can pay for new functionality as they need it. Mix and match modules to create a more customized solution

that is tailored to fit the way you do business. That translates to greater flexibility and ensures that the software is also scalable - growing with your business over the long term.

As with all Compu-Tech software, the upgrade modules are all fully-customizable. The items listed below cover some of our larger 'out of the box' add-on features, but we can provide additional functionality where-ever you see the need.

Call (509) 884-1542 today for more information.
