

Graphical Sales Modules

Inventory/Order Entry & Reporting

The graphical versions of our Sales Inventory/Order Entry and Sales Reporting modules are versatile and easy-to-use. The graphical modules communicate with your IBM i system in real time and integrate seamlessly into our agribusiness software.

The Sales Inventory & Order Entry Module allows users to view inventory with real-time status information: on-hand, sold but pending shipment or available for sale. Quick order entry provides the sales team on-the-spot reservations on available inventory at

the click of a button. Also fax and email directly from the system. As a fully integrated solution, this module interfaces with the sales journal, invoicing and accounts receivable and the general ledger.

In the Sales Reporting Module, robust search and configuration tools allow you to fully customize the data view to provide the information that matters most to you and your team. Add your logo, font type and color scheme or group rows/columns to minimize formatting time in Excel and streamline your workflow.

Call (509) 884-1542 today for more information.

Sales Inventory/Order Entry Module:

- Real-Time, Quick Order Entry
