

Grower Website Module

Expand Your Online Presence

The grower website module is offered as an upgrade to the basic Agribusiness System. Streamline your business and allow your growers quick, 24/7 access to view packouts and statements online.

Growers and administrative staff alike will thank you for providing secure, online access so that they can view and print statements and packout details at their convenience. Up-to-date information posted during harvest can also provide growers the information

that they need to make informed decisions about picking and field sorting - potentially reducing cull percentages.

Reduce your administrative costs by streamlining customer service. A website admin tool is also included so that you manage the information that gets posted to the Grower Website at the click of a mouse. Choose our private label website template or we can produce a custom design to complement and integrate with your corporate site.

Call (509) 884-1542 today for more information.

Grower Website Features:
